

PLANNED INSTRUCTION

A PLANNED COURSE FOR:

STEELS: Science, Technology and Engineering,
Environmental Literacy and Sustainability

Curriculum writing committee:

Grade Level: Fourth Grade

Date of Board Approval: _____ June 2025 _____

Curriculum Map

Overview:

In grade 4, students will make connections between the natural and human-made world through inquiry, problem solving, critical thinking, and authentic exploration. Specific areas of exploration include: Earth's features and processes; animal and plant adaptations; human body, vision and the brain; energy and energy transfer; electricity, light and heat; and sound waves and communication.

Goals:

1. Marking Period One: Over a 45-day period of time, students will aim to understand:

UNIT 1: Earth's Features and Processes (8 weeks)

- Patterns in fossils and rock layers
- Make observations and measurements about erosion
- Analyze and interpret data from maps
- Generate solutions to reduce the impact of Earth's processes

UNIT 2: Animal and Plant Adaptations (To be continued in Marking Period Two) (1 weeks)

- Investigate how internal and external structures of plants and animals work together
- Use a model to describe how animals respond to different situations

2. Marking Period Two: Over a 45-day period of time, students will aim to understand:

UNIT 2: Animal and Plant Adaptations (Continued) (3 weeks)

- Investigate how internal and external structures of plants and animals work together
- Use a model to describe how animals respond to different situations

UNIT 3: Human Body, Vision, and the Brain (6 weeks)

- Investigate how internal and external structures in humans work together
- Describe how humans respond through their senses and process the information in their brains
- Describe how light reflecting from objects allows objects to be seen

3. Marking Period Three: Over a 45-day period of time, students will aim to understand:

UNIT 4: Energy and Energy Transfer (8 weeks)

- Explain the relationship between speed and energy
- Predict outcomes about changes in energy
- Test and refine a device that converts energy from one form to another

UNIT 5: Electricity, Light, and Heat(To be continued in Marking Period Four) (1 week)

- Test and refine a device that converts energy from one form to another
- Recognize that energy can be transferred by sound, light, heat, and electric currents
- Explain that energy and fuels are derived from natural resources
- Explain how the use of natural resources can affect the environment

4. Marking Period Four: Over a 45-day period of time, students will aim to understand:

UNIT 5: Electricity, Light, and Heat (Continued) (3 weeks)

- Test and refine a device that converts energy from one form to another
- Recognize that energy can be transferred by sound, light, heat, and electric currents
- Explain that energy and fuels are derived from natural resources
- Explain how the use of natural resources can affect the environment

UNIT 6: Sound, Waves, and Communication

- Describe patterns of amplitude and wavelength
- Recognize that waves can cause objects to move
- Generate and compare multiple solutions that use patterns

Unit 1: Earth's Features and Processes Curriculum Map

Unit Overview
<p>What evidence of patterns and systems do we see in weathering, fossils, and rock formation?</p> <p>In this unit, students investigate features and processes of the Earth's surface. Students explore the rapid process of volcanic eruptions! In contrast, students also explore the gradual Earth processes of weathering and erosion. Students apply their knowledge and design solutions to mitigate the impacts of these processes on humans.</p>

Standards	Understandings	Essential Questions
<p>3.3.4.A Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time. (4-ESS1-1)</p> <p>3.3.4.B Make observations and/or measurements to provide evidence of the effects of weathering or the rate of erosion by water, ice, wind, or vegetation. (4-ESS2-1)</p> <p>3.3.4.C Analyze and interpret data from maps to describe patterns of Earth's features. (4-ESS2-2)</p>	<p>We can infer Earth's planetary history by features we observe today.</p> <p>Changes we observe on Earth are the result of energy flowing and matter cycling between interconnected systems (the geosphere, hydrosphere, atmosphere, and biosphere).</p>	<p>How do people reconstruct and date events in Earth's planetary history?</p> <p>How and why is Earth constantly changing?</p>

3.3.4.E Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans. (4-ESS3-2)		
--	--	--

Technology & Engineering Standards Alignment and Connections (3 -5)	
<p>Demonstrate essential skills of the engineering design process. (3.5.3-5.M)</p> <p>Evaluate the strengths and weaknesses of existing design solutions, including their own solutions. (3.5.3 -5.P)</p> <p>Illustrate that there are multiple approaches to design. (3.5.3 -5.S)</p> <p>Evaluate designs based on criteria, constraints, and standards. (3.5.3-5.U)</p>	
Environmental Literacy & Sustainability Standards Alignment and Connections (3 -5)	
<p>Students who demonstrate understanding can construct an argument to support whether action is needed on a selected environmental issue and propose possible solutions. (3.4.3 -5.E)</p>	

Textbook and Supplemental Resources

Mystery Science

Unit 1: Earth's Features and Processes Curriculum Plan

Learning Objectives

Students will know.... (DCI)	Students will be able to... (SEP)	Students will apply...(CCC)	DOK Level(s)
<p>Local, regional, and global patterns of rock formations reveal changes over time due to Earth's forces, such as earthquakes. The presence and location of certain fossil types indicate the order in which rock layers were formed.</p> <p>Living things affect the physical characteristics of their regions.</p> <p>Rainfall helps to shape the land and affects the types of living things found in a region. Water, ice, wind, living organisms, and gravity break rocks, soils, and sediments into smaller particles and move them around. .</p> <p>The locations of mountain ranges, deep ocean trenches, ocean floor structures, earthquakes, and volcanoes occur in patterns. Most earthquakes and volcanoes</p>	<p>Use evidence (e.g., measurements, observations, patterns) to construct an explanation.</p> <p>Apply scientific ideas to solve design problems.</p> <p>Identify the evidence that supports particular points in an explanation.</p> <p>Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon.</p>	<p>Patterns can be used as evidence to support an explanation.</p> <p>Scientific knowledge assumes order and consistency in natural systems. Science assumes consistent patterns in natural systems.</p> <p>Cause and effect relationships are routinely identified, tested, and used to explain change.</p>	<p>DOK Level 3 (Strategic Thinking): Constructing an explanation based on evidence involves reasoning, analyzing patterns or data, and synthesizing information to form a conclusion, requiring deeper thought and application of knowledge.</p> <p>DOK Level 4 (Extended Thinking): Applying scientific ideas to solve design problems involves integrating knowledge, reasoning, and creativity to develop solutions, which requires extended and complex thinking.</p> <p>DOK Level 2 (Skills/Concepts): Identifying supporting evidence involves comprehension and the ability to connect information to specific points, requiring</p>

<p>occur in bands that are often along the boundaries between continents and oceans. Major mountain chains form inside continents or near their edges. Maps can help locate the different land and water features areas of Earth.</p> <p>A variety of hazards result from natural processes (e.g., earthquakes, tsunamis, volcanic eruptions). Humans cannot eliminate the hazards but can take steps to reduce their impacts.</p>			<p>reasoning but not extensive analysis.</p> <p>DOK Level 3 (Strategic Thinking): Making observations and collecting measurements to form evidence requires strategic thinking, as it involves interpreting data and using it to explain a phenomenon.</p>

Assessments

Diagnostic	Formative	Summative
See, Think, Wonder Chart Science Journal	Lesson Quick Checks/Exit Tickets Labs/Models Participation	Lesson Assessments Unit 1 Common Assessment

Unit 2: Animal and Plant Adaptations Curriculum Map

Unit Overview
In this unit, students explore the adaptations of animals and plants. Students investigate how the external and internal structures of an organism work together as an interconnected system that aids in their growth and survival. They also use models to explore how a combination of instincts and memories influence animal behavior.

Standards	Understandings	Essential Questions
<p>3.1.4.A Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction. (4-LS1-1)</p> <p>3.1.4.B Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways. (4-LS1-2)</p>	<p>Organisms have characteristic structures, functions, and behaviors that allow them to grow, reproduce, and die.</p> <p>Animals have external and internal sensory receptors that detect different kinds of information that then gets processed by the brain.</p>	<p>How do the structures of organisms enable life's functions?</p> <p>How do organisms detect, process, and use information about the environment?</p>

Technology & Engineering Standards Alignment and Connections (3 -5)	
Compare how things found in nature differ from things that are human-made, noting differences and similarities in how they are produced and used (3.5.3 -5.FF).	
Environmental Literacy & Sustainability Standards Alignment and Connections (3 -5)	
Students who demonstrate understanding can analyze how living organisms, including humans, affect the environment in which they live, and how their environment affects them (3.4.3 -5.A)	

Textbook and Supplemental Resources

Unit 2: Animal and Plant Adaptations Curriculum Plan

Learning Objectives

Students will know.... (DCI)	Students will be able to... (SEP)	Students will apply... (CCC)	DOK Level(s)
<p>Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction.</p> <p>Different sense receptors are specialized for particular kinds of information, which may be then processed by the animal's brain. Animals are able to use their perceptions and memories to guide their actions.</p>	<p>Make observations to produce data to serve as the basis for evidence for an explanation of a phenomenon or test a design solution.</p> <p>Ask questions that can be investigated and predict reasonable outcomes based on patterns such as cause and effect relationships.</p> <p>Develop a model to describe phenomena.</p>	<p>Similarities and differences in patterns can be used to sort, classify, and analyze simple rates of change for natural phenomena.</p> <p>Cause and effect relationships are routinely identified.</p> <p>Knowledge of relevant scientific concepts and research findings is important in engineering.</p> <p>Similarities and differences in patterns can be used to</p>	<p>DOK Level 3 (Strategic Thinking): Making observations to collect data for evidence involves reasoning and using that data to explain or test a design solution, which requires analysis and interpretation.</p> <p>DOK Level 2 (Skills/Concepts): Asking investigable questions and predicting outcomes based on patterns requires identifying relationships and making logical predictions, which involves reasoning and understanding concepts.</p> <p>DOK Level 3 (Strategic Thinking): Developing a model to describe phenomena requires the application of knowledge, reasoning, and analysis to represent a scientific concept or process.</p>

	<p>Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.</p> <p>Construct an argument with evidence, data, and/or a model.</p> <p>Use a model to test interactions concerning the functioning of a natural system.</p>	<p>sort and classify designed products.</p> <p>A system can be described in terms of its components and their interactions.</p>	<p>DOK Level 4 (Extended Thinking): Generating and comparing multiple solutions requires extended thinking, as it involves evaluating different approaches and determining their effectiveness based on specific criteria and constraints.</p> <p>DOK Level 3 (Strategic Thinking): Constructing an argument based on evidence, data, or a model requires critical thinking and reasoning to synthesize information and support a conclusion.</p> <p>DOK Level 3 (Strategic Thinking): Using a model to test interactions in a natural system involves applying reasoning to simulate and analyze how different factors affect the system, requiring strategic thinking.</p>

Unit 3: Human Body, Vision and The Brain Curriculum Map

Unit Overview
In this unit, students investigate structures and functions of the human body. Students explore how our bones and muscles are interconnected, how our eyes interact with light and impact our vision, and how our brain responds to stimuli in our environment.

Standards	Understandings	Essential Questions
3.1.4.A. Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction (4-LS1-1)	Organisms have characteristic structures, functions, and behaviors that allow them to grow, reproduce, and die.	How are instruments that transmit and detect waves used to extend human senses?
3.1.4.B. Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways (4-LS1-2)	Animals have external and internal sensory receptors that detect different kinds of information that then gets processed by the brain.	How do the structures of organisms enable life's functions? How do organisms detect, process, and use information about the environment?

3.2.4.F. Develop a model to describe that light reflecting from objects and entering the eye allows objects to be seen (4-PS4-2)		
--	--	--

Technology & Engineering Standards Alignment and Connections (3 -5)	
Use appropriate symbols, numbers and words to communicate key ideas about technological products and systems (3.5.3 -5.A) Follow directions to complete a technological task (3.5.3 -5.C).	
Environmental Literacy & Sustainability Standards Alignment and Connections (3 -5)	
Students who demonstrate understanding can analyze how living organisms, including humans, affect the environment in which they live, and how their environment affects them (3.4.3 -5.A.)

Unit 4: Energy and Energy Transfer Curriculum Map

Unit Overview
In this unit, students explore energy! Students investigate how energy is stored, how it can make objects move, and how collisions transfer energy between objects. Students also construct chain reaction machines to explore the many different ways that energy can be transferred.

Standards	Understandings	Essential Questions
<p>3.2.4.A Use evidence to construct an explanation relating the speed of an object to the energy of that object. (4-PS3-1)</p> <p>3.2.4.C Ask questions and predict outcomes about the changes in energy that occur when objects collide.(4-PS3-3)</p>	Producing energy useful in everyday life means to convert some available energy into a desired form, which is then delivered to users.	<p>How do food and fuel provide energy? If energy is conserved, why do people say it is produced or used?</p> <p>What is meant by conservation of energy?</p>

3.2.4.D Apply scientific ideas to design, test, and refine a device that converts energy from one form to another. (4-PS3-4)	<p>Waves are repeating patterns of motion that transfer energy and information without transferring matter.</p> <p>All materials, energy, and fuels that humans use are derived from natural sources, some of which are renewable over time and others are not.</p>	How is energy transferred between objects or systems?
--	---	---

Technology & Engineering Standards Alignment and Connections (3 -5)	
Practice successful design skills (3.5.3-5.Q)	
Demonstrate essential skills of the engineering design process. (3.5.3-5.M)	
Explain how various relationships can exist between technology and engineering and other content areas (3.5.3-5.X).	
Environmental Literacy & Sustainability Standards Alignment and Connections (3 -5)	
Students who demonstrate understanding can critique ways that people depend on and change the environment (3.4.3 -5.F)	

Textbook and Supplemental Resources

Unit 4: Energy and Energy Transfer Curriculum Plan

Learning Objectives

Students will know.... (DCI)	Students will be able to... (SEP)	Students will apply...(CCC)	DOK Level(s)
<p>Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy.</p> <p>The expression “produce energy” typically refers to the conversion of stored energy into a desired form for practical use.</p>	<p>Apply scientific ideas to solve design problems.</p> <p>Develop a model using an analogy, example, or abstract representation to describe a scientific principle.</p> <p>Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon.</p>	<p>Most scientists and engineers work in teams.</p> <p>Science affects everyday life.</p> <p>Similarities and differences in patterns can be used to sort, classify, and analyze simple rates of change for natural phenomena.</p> <p>Cause and effect relationships are routinely identified, tested, and used to explain change.</p>	<p>DOK Level 4 (Extended Thinking): Applying scientific concepts to solve design problems involves integrating knowledge, reasoning, and creativity to develop solutions, which requires complex and extended thinking.</p> <p>DOK Level 3 (Strategic Thinking): Developing a model using analogies or abstract representations requires reasoning and applying knowledge to represent scientific concepts, which</p>

<p>Possible solutions to a problem are limited by available materials and resources (constraints). The success of a designed solution is determined by considering the desired features of a solution (criteria). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account.</p> <p>Energy and fuels that humans use are derived from natural sources, and their use affects the environment in multiple ways. Some resources are renewable over time, and others are not.</p> <p>Testing a solution involves investigating how well it performs under a range of likely conditions.</p>	<p>Analyze and interpret data to make sense of phenomena using logical reasoning.</p> <p>Obtain and combine information from books and other reliable media to explain phenomena. Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.</p>	<p>Patterns can be used as evidence to support an explanation.</p> <p>Cause and effect relationships are routinely identified and used to explain change.</p> <p>Knowledge of relevant scientific concepts and research findings is important in engineering.</p>	<p>involves deeper analysis and understanding.</p> <p>DOK Level 3 (Strategic Thinking): Collecting observations and measurements to form evidence requires strategic thinking, as it involves interpreting data and using it to explain a phenomenon.</p> <p>DOK Level 3 (Strategic Thinking): Analyzing and interpreting data involves applying logic and reasoning to draw conclusions about phenomena, requiring critical thinking and deeper analysis.</p> <p>DOK Level 3 (Strategic Thinking): Obtaining and synthesizing information from various sources to explain phenomena requires reasoning and analysis to integrate information from different media, which is a strategic thinking task.</p> <p>DOK Level 4 (Extended Thinking): Generating and comparing multiple solutions involves extended thinking, as it</p>
---	---	---	---

			requires evaluating different solutions based on criteria and constraints, analyzing their effectiveness, and determining the best approach.

Unit 5: Electricity, Light and Heat Curriculum Map

Unit Overview
In this unit, students investigate the different forms of energy! Students obtain information about how heat energy, solar energy, wind energy, and water energy can be transformed into electrical energy. They also construct devices that convert energy from one form into another, such as heat into motion and electricity into light.

Standards	Understandings	Essential Questions
<p>3.2.4.D Apply scientific ideas to design, test, and refine a device that converts energy from one form to another. (4-PS3-4)</p> <p>3.2.4.B Make and communicate observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents. (4-PS3-2)</p>	<p>Producing energy useful in everyday life means to convert some available energy into a desired form, which is then delivered to users.</p> <p>Waves are repeating patterns of motion that transfer energy and information without transferring matter.</p>	<p>What is light?</p> <p>How can one explain the varied effects that involve light?</p>

<p>3.3.4.D Obtain and combine information to describe that energy and fuels are derived from natural resources and their uses affect the environment. (4-ESS3-1)</p>	<p>Changes we observe on Earth are the result of energy flowing and matter cycling between interconnected systems.</p> <p>All materials, energy, and fuels that humans use are derived from natural sources, some of which are renewable over time and others are not.</p>	
--	--	--

Technology & Engineering Standards Alignment and Connections (3 -5)	
<p>Compare how things found in nature differ from things that are human-made, noting differences and similarities in how they are produced and used (3.5.3-5.FF)</p> <p>Classify resources used to create technologies as either renewable or nonrenewable (3.5.3-5.F)</p> <p>Explain why responsible use of technology requires sustainable management of resources (3.5.3-5.E)</p>	
Environmental Literacy & Sustainability Standards Alignment and Connections (3 -5)	
<p>Students who demonstrate understanding can investigate how perspectives over the use of resources and the development of technology have changed over time and resulted in conflict over the development of societies and nations (3.4.3-5.G)</p>

Unit 6: Sound, Waves, and Communication Curriculum Map

Unit Overview
In this unit, students investigate the science of sound. Students construct physical devices to feel the vibrations that allow us to communicate across distances. Students also use digital devices to visualize the characteristics of different sound waves that

cause us to hear different things.

Standards	Understandings	Essential Questions
<p>3.2.4.E Develop a model of waves to describe patterns in terms of amplitude and wavelength and that waves can cause objects to move. (4-PS4-1)</p> <p>3.2.4.G Generate and compare multiple solutions that use patterns to transfer information. (4-PS4-3)</p>	<p>Producing energy useful in everyday life means to convert some available energy into a desired form, which is then delivered to users.</p> <p>Waves are repeating patterns of motion that transfer energy and information without transferring matter.</p>	<p>What other forms of electromagnetic radiation are there?</p> <p>What are the characteristic properties and behaviors of waves?</p>

Technology & Engineering Standards Alignment and Connections (3 -5)

Judge technologies to determine the best one to use to complete a given task or meet a need (3.5.3-5.K)

Describe requirements of designing or making a product or system (3.5.3-5.O).

Environmental Literacy & Sustainability Standards Alignment and Connections (3 -5)

Students who demonstrate understanding can investigate how perspectives over the use of resources and the development of

technology have changed over time and resulted in conflict over the development of societies and nations (3.4.3-5.G).
